SHORTWAVE WORLD BAND RADIO

The standard AM broadcast (also called medium wave-MW) radio band extends from 530 to 1800 KHz and uses 10 KHz frequency spacing in the USA. Shortwave radio signals, 1800 KHz and extends to 30 MHz. Shortwave radio signals, unlike medium wave signals, will bounce off the earth's ionosphere and travel many thousands of miles depending on the time of day, season, sunspots, etc.. Shortwave broadcasters use the AM mode with typical fine tuning steps of [1 KHz]. In order to avoid confusion of the many time zones, international broadcasters use Coordinated Universal Time (UTC). UTC refers to the zero Meridian that runs through Greenwich, England. 24 hours format - 5 hours ahead of the EST and 4 hours ahead when Eastern Daylight Savings Time is in effect.
